

Model Selection with ScaleR

Revolution Analytics

Overview

In this session we will discuss model selection using `RevoScaleR`.

We will focus on automatic model selection using `rxStepControl()`.

Folder configuration

```
## dir config
big.data.path <- Sys.getenv("ACADEMYR_BIG_DATA_PATH")
if (big.data.path == "") {
  Sys.setenv(ACADEMYR_BIG_DATA_PATH = "/usr/share/BigData")
  big.data.path <- Sys.getenv("ACADEMYR_BIG_DATA_PATH")
}
data.path <- "../data"
output.path <- "../output/xdp"
if (!file.exists(output.path)) dir.create(output.path, recursive = TRUE)
sample.data.dir <- rxGetOption("sampleDataDir")
```
